

**Where your valuables
are concerned, don't go
unprotected**

CushionGard®FR, superior protection - in the long run

A multi-purpose, highly versatile and durable product, new CushionGard®FR has been specially developed to provide effective protection of facades and curtain walling, as well as awkward shapes and sizes.

It's much less labour intensive to install as it can be easily wrapped and fixed around mullions allowing extra long runs. It avoids the need for cutting and jointing required by using conventional twinwall board protection - yet without compromising impact resistance. It's also much easier to remove prior to handover.

Innovative composition provides superior impact resistance yet great flexibility

CushionGard®FR contains bubbles sandwiched between two layers of film giving this new product a greater strength than traditional bubblewrap, providing outstanding impact resistance.

It's lightweight too, with a flexibility that makes it well suited for wrapping around awkward surfaces such as doors, columns, staircasing, balustrades and general fixtures and fittings.

Flame Retardant and LPCB approved too

With construction sites needing to conform to the Joint Code of Practice they can be secure in the knowledge that CushionGard®FR meets these requirements and is fully certified by the LPCB.

Specifically designed for protection of curtain walling/glazing

CushionGard®FR contains bubbles sandwiched between two layers of film

FEATURES & *BENEFITS*

Each bubble sandwiched between two layers of film
Stronger than traditional bubblewrap

Produced by ISO 9001 manufacturer
